Perhaps ten years ago we might have found theorists who would have argued differently. But opponents of this view are surely hard to find today so accepting without further commentary the importance of having available a sound theory of choice for guiding descriptions of organizational behavior let us ask ourselves instead, how adequate for that purpose are currently available decision theories? An immediately noticeable characteristic of a disturbingly large number of presumably organizational decision theories is that they are indistinguishable from counterpart theories of individual choice behavior, even though in its flesh-and-bones reality we don't usually have much difficulty distinguishing an individual from an organizational decision body.
