Studies from the Rockefeller Institute for Medical Research Volume 21

By Rockefeller Institute Research

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 210 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 Excerpt: . . . at 2130 and had a specific rotation of 16. 85. No corresponding salt of chitonic acid has been described. Discussion of Residts. --The results here enumerated permit only of the conclusion that chondrosamine is isomeric with glucosamine. The fact that in the process of the osazone formation the amino group is eliminated from the molecule, renders it probable that the group is attached to the a-carbon (to the carbonyl group). The details of the structure of chondrosamine will be established by further investigation. Work in this direction is now in progress. In conclusion we wish to refer again to an observation made in Hofmeisters laboratory. Kondo3 prepared on treatment of the 2 Ber. d. deutsch. chem. Gesellsch. , xxvii, p. 140, 1894. 3 Biochem. Zeitschr. , xxvi, p. 116, 1910. products of hydrblysis of chondroitin sulphuric acid an osazone having a melting point at 143C. Discussing...

Reviews

I just began reading this pdf. It is actually written in straightforward words instead of hard to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.
