Forgotten Books, 2017. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Applying Height Growth and Site Index Curves for Inland Douglas-Fir Site index was defined to be the average total height of the three best site trees (per one-half acre) at an index age of 50 years at breast height. Because the length of time it takes a seedling to reach breast height may be strongly influenced by factors that are poorly related to site quality - such as animal damage, snow damage, and plant competition in the immediate vicinity of the seedling (Cochran 1979; Curtis 1964) - index age was located at breast height rather than the base of the tree.
