Both as a student and teacher, the author is indebted to Sir J. A. Ewing's lucid exposition of this subject. Thanks are also due to Professor William J. Goudie for suggestions in reference to the determination of the resultant pressure on turbine blading; to the American Society of Mechanical Engineers and the Institution of Mechanical Engineers, London, for permission to use information contained in original papers by members; and to the various firms who have readily supplied information concerning their products. Mr. J. C. MacLagan, designer of the North British double-acting two-cycle Diesel engine, and his firm were particularly helpful in this respect.
