This book provides a timely redesign of project management for an increasingly results-focused business world. A successful social system is built around and laser-focused on its purpose. This book begins with the paradox that while project management techniques, certifications, organizations, and education are becoming increasingly ubiquitous project failure seems all too common. Systems thinking points to the reasons why as well as the way out. It continues insight into systems thinking and its implications for projects, design principles to enable project success, and a group of innovative tools to assist you in the process. Finally, it challenges you to go out and make these principles and tools your own and achieve your own project success. The author, Mark D. Steele, has over 29 years of project management experience including engineering and construction projects across industries as diverse as manufacturing, power, healthcare, oil and gas, utilities, commercial and public sector. He provides consulting services for process improvement, risk management, cost and schedule management, and litigation and expert testimony.
