Dover Publications Inc., United States, 1989. Paperback. Book Condition: New. New edition. 212 x 138 mm. Language: English . Brand New Book. Galapagos is a glorious book. It is high romance, exact science, fascinating history, wild adventure. Nation The Galapagos Islands are famed for their remarkable wildlife, including land and marine iguanas, land tortoises, four-eyed fish, and flightless cormorants and albatross. In 1835, Charles Darwin observed variations among the islands species that inspired him to formulate the theory of natural selection. Eighty-eight years later, in 1923, a scientific expedition sponsored by the New York Zoological Society followed in Darwin s wake. Led by renowned biologist and explorer William Beebe, the scientists visited the the islands to study and obtain specimens of indigenous plants and animals. This is Beebe s personal account of that fascinating expedition. Combining rare literary skill with careful research, Beebe produced an exceptionally readable volume, replete with youthful enthusiasm, a romantic s awe before the mysteries of nature, and a scientist s passion for accurate description. He recounts the expedition s enormously productive results, including specimens of 60 species previously unknown to science, and an unparalleled accumulation of data that stimulated many scientific papers and new avenues of naturalistic inquiry. Beebe s account is enhanced with more than 100 splendid illustrations, selected from hundreds of paintings, drawings, and photographs by expedition members. A classic of popular science, it is scientifically rigorous as well as exciting and accessible.
