

## Development of Porous Photoelectrodes for Solar Water Splitting: Combinatorial Approach

By Aliaksandr Stepanovic

Südwestdeutscher Verlag für Hochschulschriften. Paperback. Condition: New. 108 pages. Dimensions: 8.7in. x 5.9in. x 0.2in. Nowadays clean and renewable energy supply is one of the biggest challenges for the mankind. Hydrogen is often proposed as a prospective fuel of the future, but there are numerous scientific and technological problems to be solved on the way to the hydrogen economy. One of them is hydrogen production. The most efficient way of hydrogen production would be direct water splitting using solar energy. Photoelectrode materials for solar water splitting cells must fulfill a number of requirements: an appropriate band gap, band edge positions, high specific surface area, long term chemical and mechanical stability, low cost of fabrication. In this work, porous thin film electrodes for photoelectrochemical solar water splitting were developed by the dealloying approach. The search for materials with optimal physical and photoelectrochemical properties inevitably involves fabrication and characterization of a large number of samples. In order to accelerate this search, combinatorial and high-throughput methods were used for fabrication and investigation of the thin film materials libraries. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.

### Reviews

*Complete manual! Its this type of excellent study. This can be for all who statte there was not a worth looking at. Your daily life span will probably be enhance when you complete reading this article pdf.*

-- **Lottie Murazik Sr.**

*The ebook is simple in go through safer to understand. I could possibly comprehended every thing out of this composed e pdf. Its been designed in an exceptionally basic way in fact it is only soon after i finished reading this pdf by which actually altered me, modify the way i really believe.*
