POTENTIAL HEALTH RISKS TO DOD FIRING-RANGE PERSONNEL FROM RECURRENT LEAD EXPOSURE (PAPERBACK)

To read **Potential Health Risks to DOD Firing-Range Personnel from Recurrent Lead Exposure (Paperback)** eBook, make sure you click the web link beneath and save the ebook or get access to additional information which are have conjunction with POTENTIAL HEALTH RISKS TO DOD FIRING-RANGE PERSONNEL FROM RECURRENT LEAD EXPOSURE (PAPERBACK) ebook.

National Academies Press, United States, 2013. Paperback. Condition: New. Language: English . Brand New Book. Lead is a ubiquitous metal in the environment, and its adverse effects on human health are well documented. Lead interacts at multiple cellular sites and can alter protein function in part through binding to amino acid sulfhydryl and carboxyl groups on a wide variety of structural and functional proteins. In addition, lead mimics calcium and other divalent cations, and it induces the increased production of cytotoxic reactive oxygen species. Adverse effects associated with lead exposure can be observed in multiple body systems, including the nervous, cardiovascular, renal, hematologic, immunologic, and reproductive systems. Lead exposure is also known to induce adverse developmental effects in utero and in the developing neonate. Lead poses an occupational health hazard, and the Occupational Safety and Health Administration (OSHA) developed a lead standard for general industry that regulates many workplace exposures to this metal. The standard was promulgated in 1978 and encompasses several approaches for reducing exposure to lead, including the establishment of a permissible exposure limit (PEL) of 50 mug/m³ in air (an 8-hour time-weighted average [TWA]), exposure guidelines for instituting medical surveillance, guidelines for removal from and return to work, and other risk-management strategies. An action level of 30 mug/m³ (an 8-hour TWA) for lead was established to trigger medical surveillance in employees exposed above that level for more than 30 days per year. Another provision is that any employee who has a blood lead level (BLL) of 60 mug/dL or higher or three consecutive BLLs averaging 50 mug/dL or higher must be removed from work involving lead exposure. An employee may resume work associated with lead exposure only after two BLLs are lower than 40 mug/dL. Thus, maintaining BLLs lower than 40 mug/dL was judged by OSHA to...
