Excerpt: .table given above the average figure was used. The working pressure on the system varies from 45 to 90 lbs., averaging about 65. On the completion of the system a 6-inch meter was installed at the Columbus water works pumping station for the measurement of all water sold to the village. This meter was new and was carefully tested by the city department and stated to register accurately down to the smallest stream provided by their testing apparatus, namely 1/32 inch. It is, however, probable that there would be some under registration in case of very small flow. During the first month s operation but two services were connected, and the quantity of water registered by the meter was 600 cubic feet, equal to a little less than 27 gallons per mile per day, including whatever may have been used by the two consumers. Soon after this 80 taps were made. After an interval of about two months the city meter and all individual meters were read. The amount of water passing the 6-inch meter for the period of 58 days was 40,600 cubic feet and the sum of the readings of the house meters was 39,300 cubic feet. During this period an extension of 550 feet was made and water was used to settle the trench to the amount of 1,200 cubic feet, leaving a quantity unaccounted for of 100 cubic feet or 2.3 gallons per day per mile. The amount of water...
