Brand New Book ***** Print on Demand *****.Excerpt from Soil Moisture and Crop Production Second, material may be added to the soil to partially fill the large spaces and increase the number Of points Of contact. The most desirable material for this purpose is humus - decayed organic matter. Clay would have a similar effect, but its use is not so practicable and it also introduces some disadvantages. Increase in the stock Of humus and its deep incorporation is therefore effective to increase the water capacity Of light sand soil, and, when coupled with deep ploughing and the use Of compacting implements, the best results are attained. The introduction Of the humus more than Offsets the disadvantage of deep ploughing. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
