

Additive Manufacturing based on Material Extrusion Technology

Filesize: 6.81 MB

Reviews

Great electronic book and valuable one. It really is simplistic but surprises within the fifty percent from the book. Its been printed in an extremely simple way in fact it is merely right after i finished reading this publication by which in fact modified me, change the way i really believe.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The book "Additive manufacturing based on material extrusion technology" has an aim to emphasize better understanding the process of additive manufacturing, in which the product is fabricated layer by layer. The work is based on Material Extrusion technology - FDM and gives to production and civil engineers, medical professionals, university professors and students, the information they need to better use the potential of additive technologies. The book also provides an overview of the additive manufacturing processes with development procedure of RP models and a typical rapid prototyping cycle which are analyzed in general terms. The properties of polymers, used in fabricated examples in FDM process, have been analyzed and recommendations for future, efficient use are given. Consequently, the book gives very useful guidelines for all which are involved in a process of realization of this revolutionary technology of the future. | Format: Paperback | Language/Sprache: english | 76 pp.
