Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. Excerpt: .by the ice of El Portal Stage. No continuous moraine exists here, only scattered ice-borne boulders. Many boulders are in process of breaking up; others have already disintegrated into granite sand. The fragments at the base of the large boulders are spalls split from it by frost action. for them, one must have some conception of the extent of the earlier ice in the Sierra Nevada and also a knowledge of the habits of glaciers and the manner in which they adjust their movements to different types of topography. That the moraines of the Glacier Point Stage are much older than the moraines of El Portal Stage is readily evident from the foregoing. Even if it be granted that the relative scantiness of the Glacier Point deposits may be due to the shorter duration of the Glacier Point Stage as compared with El Portal, it is manifest from the more advanced state of disintegration of the boulders in the Glacier Point moraines that the Glacier Point Stage preceded El Portal Stage by a considerable length of time. The Glacier Point Stage clearly is to be assigned to the early Pleistocene, and some argument may even be found for correlation with the Nebraskan, for the Glacier Point is the earliest stage of glaciation of which any recognizable deposits remain in the Sierra Nevada (Matthes, 1933, p. 33). Figure 27.--Glacial boulder of El Portal Stage resting on a platform overlooking the Big Arroyo. Weathering has produced a bread-crust effect..
