It is after setting up these that the book will guide you on how to create your first application in Rest. Messages in REST are discussed in this book. You will learn how to send the messages between the client and the server in your application. Methods are also, discussed in detail, including methods of different types, some being read only and others being read and write, so you will know how to use these in REST. The process of caching which reduces the overhead of processing requests on the server side is explored. Statelessness, in which the server does not keep information about the clients is explained, so you will know how this is implemented in REST. The process of addressing so as to identify the resources on the server is also covered. Finally, security and idempotence is explored. Here is a preview of what you ll learn: Definition Setting Up the Environment Creating Your First Application Resources Messages Methods Caching Statelessness Addressing Security Java (JAX-RS) Resource Naming Idempotence Uniform Interface Complex REST Requests Rest Server Responses REST as a Lightweight Web Service.
