Excerpt from An Empirical Study of Certain Tests for Individual Differences The history of scientific inquiry into the nature and amount of individual differences dates back only about twenty-five years. Before that time experimental psychology had concerned itself chiefly with investigations into typical mental functions, especially those of perceiving the external world. For this purpose long and detailed tests were made upon a very few, or perhaps a single subject. Galton in England was the first who devised and applied a series of tests, both physical and mental, to large numbers of subjects with a view to determining norms and studying the amount, causes and kinds of variation. Since the publication in 1883 of Galton's Inquiries into the Human Faculty and its Development, the work done in this field in England has been chiefly confined in its application to school children; witness Bryant's experiments in 1886 in testing the character of school children and the more recent work of Winch, Spearman, W. G. Smith, Wimms, and Burt. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books....
