Springer, Netherlands, 1980. Hardback. Book Condition: New. 1980.. 221 x 152 mm. Language: English . Brand New Book. The extraordinarily rapid advances made in mathematics since World War II have resulted in analysis becoming an enormous organism spreading in all directions. Gone for good surely are the days of the great French courses of analysis which embodied the whole of the analytical knowledge of the times in three volumes-as the classical work of Camille Jordan. Perhaps that is why present-day textbooks of analysis are disproportionately modest relative to the present state of the art. More: they have retreated to the state before Jordan and Goursat. In recent years the scene has been changing rapidly: Jean Dieudonné is offering us his monumental *Elements d'Analyse* (10 volumes) written in the spirit of the great French *Course d'Analyse*. To the best of my knowledge, the present book is the only one of its size: starting from scratch-from rational numbers, to be precise-it goes on to the theory of distributions, direct integrals, analysis on complex manifolds, Kahler manifolds, the theory of sheaves and vector bundles, etc. My objective has been to show the young reader the beauty and wealth of the unusual world of modern mathematical analysis and to show that it has its roots in the great mathematics of the 19th century and mathematical physics. I do know that the young mind eagerly drinks in beautiful and difficult things, rejoicing in the fact that the world is great and teeming with adventure.
