Several courses of lectures and demonstrations were given during the seven succeeding years; but of late, increased work in other departments has prevented me from devoting so much of my time to this branch of teaching. The course on urine included oral lecture and practical demonstrations, in which every pupil performed the experiments with his own hands, according to the directions given in the Tables, which will be found at page 401 of the present work. The lecture (to page 362) were first published in the *British Medical Journal*, and are now printed in a collected form, with several additions. I have endeavoured to restrict myself, as far as possible, to those parts of the subject which are of practical importance in investigating the nature of a case. It must be borne in mind that the lectures were given to practitioners, most of whom had far larger experience in practice than myself.
