

Mathematical Questions and Solutions Volume 21

Filesize: 4.75 MB

Reviews

Completely one of the better pdf I have got possibly go through. I really could comprehend every little thing using this composed ebook. It is extremely difficult to leave it before concluding, once you begin to read the book.

MATHEMATICAL QUESTIONS AND SOLUTIONS VOLUME 21

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1874 Excerpt: .M.A.)--A triangular frame ABC without weight is kept in equilibrium by three forces at right angles to the sides whose lines of action meet in a point L. O is the centre of the circle ABC, LO is produced to L so that $OL = LO$; prove that the stresses at A, B, C will be perpendicular and proportional to LA, LB, LC . Solution by John C. Malet, M.A. From L draw the perpendiculars LA, LB, LC , and from L draw the perpendiculars LD, LE, LF , on the sides of the frame. Now if P, Q, R be the three forces, since they act perpendicularly to the sides of the triangle they must be proportional to them; therefore $P:Q:R = LD:LE:LF$. (1.) Let the stress at A= X , and let it act along the line AA' ; then for the equilibrium of the bar AC, taking moments about C, we have $X \cdot AC \cdot \sin A = Q \cdot LC$ and for AB, $X \cdot AB \cdot \sin A = R \cdot LB$, from which by (1) we have $\sin A \cdot LC = \frac{Q}{X} \cdot AC$ and $\sin A \cdot LB = \frac{R}{X} \cdot AB$ therefore AA' must be perpendicular to LC ; similarly the stresses at B and C are perpendicular to LB, LC , which proves the first part of the question. Let Y and Z be the stresses at B and C. We have now the bar AB in equilibrium under...
