

The Dental Record, Vol. 2 (Classic Reprint)

By European Orthodontic Society

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Dental Record, Vol. 2 Of the four typical modes of attachment of teeth, the method of insertion in sockets, or gomphosis, attains in all extant orders of Mammalia possessing true teeth, except in some Cetaceans. This form of attachment also exists in Crocodilia, and with the rostral teeth of Pristis. On this occasion the consideration of the general subject of the attachment of teeth is confined to the limited zoological area of man, an aspect of the question which immediately concerns the dentist, and the correspondent, Student. Though in this article there may not be stated anything that is not already known, yet, if it amount to only a reiteration of structural and physiological facts, with their bearing on certain of the more common pathological conditions, some useful purpose may be served. The Alveolar-Dental Membrane, or Dental Periosteum, is the membrane which fixes the tooth to the walls of the socket. In structure it consists of four elements - fibrous tissues, cells, blood vessels, and nerves. The Fibrous tissue is more or less dense,...
