Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: .and second molts they were very delicate, and many died without any apparent cause. These larvae are especially interesting because they omit the plain green, unmarked stage common to most sphingid larvae in the first molt, and because they show, in different stages, marks characteristic of three other species, yet are very different from all of them. I have seen no other sphingid eggs which undergo so many changes of color, or which have any color except green, becoming either yellowish or lead color ju6t before hatching. Aug. 19.--The first pupa cast the larva skin. The pupa was 4 cm. long, rather stout, with eyes and antennae well defined, and wing-covers short in proportion. Its color was green at first, then brown. LIFE HISTORIES OF NORTH AMERICAN GEOMETRIDAE.--I. BY HARRISON G. DYAR, WASHINGTON, D. C. Aplodrs mimosaria Guenee. This larva has been briefly described by Walsh and quoted in Packard s works. The description is not only brief, but erroneous, as the larva is entirely without short velvety hairs and has none of the structure of Phobetron, as is stated by Walsh. The moths fly early in June, emerging from over-wintering pupae. There is a single annual generation, the six larval stages being slowly passed through, lasting from late June, when the eggs hatch, to September. Observations made on Long Island, N. Y. Egg-Elliptical, very strongly flattened above and below, the edges sharp, the sides perpendicular, so that the eggs resemble biscuits. One end is depressed,...
