Original publisher: Aberdeen Proving Ground, MD: Army Research Laboratory, 2009 OCLC Number: (OCoLC)466363913 Subject: Composite materials -- Bonding -- United States. Excerpt: . . . 5. Experimental Results Table 4 summarizes the results of uniaxial tension testing for the two specimen types of figure 4. A third column displays an adjusted value for the CWB test results, which are calibrated to account for the known stress concentration as determined from the modeling results (table 2). Table 4. Both the directly measured values and adjusted values are reported in table 4. Table 4 shows no comparison to modeling strength predictions, as the experiments are intended to establish the modeling capability for prediction of this failure mode. The standard deviation on strength properties may seem quite high with reported values of 22. 8 and 17. 6 , but it should be noted that previous testing of in-plane properties consistently showed standard deviations on the order of 15 using well-known, consistent, standard techniques and specimens. A certain amount of inconsistency is inherent to the 3-D orthogonal architecture, given its nonhomogeneity, and microstructural complexity, which is given to manufacturing variability. The...
