By Roman Andie

Lighthouse Books for Translation and Publishing. Paperback. Condition: New. 136 pages.

Dimensions: 11.0in. x 8.5in. x 0.3in.1. What is conscious observer - self Observer, which remains outsider to the physical world in the recent day physics - both classical and quantum. Hence one does not have a theory of consciousness and cannot speak about conscious information.

Thermodynamics gives only the notion of entropy as a measure for the ignorance. Therefore there is a long list of questions that Englands theory does not address. What are the physical correlates of attention, sensory perception, cognition, emotions relating closely to information, etc. Is there some variational principle behing concious existence, and does it imply evolution Could second law and DDA be seen as consequences of this variational principle England does not say much about quantum theory since he talks only about thermodynamics but his hypothesis is consistent with quantum theory. The restriction to thermodynamics allows only statistical description and notions like macroscopic quantum coherence are left outside. This item ships from multiple locations.
