

Artificial Life, Computers, and Time Travel: Tales of Action and Suspense (Paperback)

By John E Christ

Createspace Independent Publishing Platform, United States, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Nothing stirs the imagination more than a story that ponders on what may be impossible with current technology. No mathematical manipulation can create life or shift time backwards and forwards with the flip of a switch. All ventures into artificial life and time travel are intellectual exercises. To begin, the laws of physics are brutally inflexible; none can be broken, even with the permutations of quantum weirdness. The issue with sentient computers is closer to fruition but still totally a matter of solving the problems of consciousness and sentient thought. Even with these well-known and acknowledged sobering limits, artificial life, sentient computers, and time travel exist as possibilities in the minds of science fiction aficionados and futurists. Artificial life by definition means life generated without the use of preexisting living matter. That life may be completely organic as androids, inorganic as robots, or composite as cybernetic combinations of both. When that life is created the big question is can it achieve consciousness and sentience. The stories in this book explore the possibilities for the reader to decide whether life is...
