

## Metallography of Aluminum Alloys

By Lucio F. Mondolfo

Johnson Press. Hardcover. Book Condition: New. Hardcover. 360 pages. Dimensions: 8.6in. x 5.6in. x 1.3in. Metallography of Aluminum Alloys By Lucio F. Mondolfo. PREFACE: In the last few years, a continuous development in the use of aluminum alloys has steadily increased the number of metallurgists interested in them. Because of this growing interest and the fact that the most recent books on the subject are now somewhat outdated, it was believed that a new book could be useful. Since many books on the general metallurgy are available, this book has been limited purposely to aluminum alloys. It is intended for consultation by the plant metallurgist, rather than as a textbook for students. For these reasons no details are given on general metallurgy and metallography and most of the theoretical problems have not been treated at all or have been dismissed briefly. The first part of the book illustrates the equilibrium diagrams of aluminum alloys. All information about binary, ternary, and quaternary diagrams published up to date has been sifted, coordinated, and often integrated with data from the authors' experiments, to eliminate the discrepancies between the different authors. Usually the discrepancies are only minor, but at times...
