

Greek and Roman Calendars. Constructions of Time in the Classical World.

By HANNAH, R.,

Book Condition: New. Duckworth, London, n.d. Photomechanical reprint ed.2007. VI,170p. Paperback. 'Hannah's is the first book in some twenty-five years to survey this difficult, technical, and important topic. Hannah clearly sets out his goals in the Introduction: he aims, in part, to make available to a 'wider readership' the results of his predecessors and to update the story of the Greek and Roman calendars with recent discoveries on these calendars. He further aims to set the time-reckoning devices of the Greeks and Romans on a 'stage occupied by real people', in other words to approach the calendars of the Greeks and Romans from both astronomical and social perspectives. Hannah's work moves generally in chronological order and covers a wide range of topics including the principal units of time based on observational astronomy, the calendars of the Greeks from the late Bronze Age through the Hellenistic period, the calendars of Rome, and the afterlife of the Julian calendar in the Christian world. It includes a Select Bibliography, an Index of Passages Cited, and an Index of Subjects. (.) The work succeeds as a short and updated overview of Greek and Roman calendars and the problems that beset our understanding of them...

These kinds of publications are everything and made me hunting ahead of time and more. I have got read through and I am confident that I am going to go back and study it again yet again later on. It has been printed in an extremely basic way in fact it is only after I finished reading this pdf in which in fact it transformed me, altered the way I believe.
