*This ebook could be well worth a study, and superior to other. It really is basic but unexpected situations inside the 50 % of your ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

Springer-Verlag Berlin and Heidelberg GmbH Co. KG, Germany, 2009. Paperback. Condition: New. 2009 ed.. Language: English . Brand New Book. Constraint programming (CP) is a powerful programming paradigm for the declarative description and the effective solving of large combinatorial problems. Based on a strong theoretical foundation, it is increasingly attracting commercial interest. Since the 1990s, CP has been deployed by many industry leaders, in particular to model heterogeneous optimization and satisfaction problems. - amples of application domains where such problems naturally arise, and where constraint programming has made a valuable contribution, are scheduling, production planning, communication networks, routing, planning of satellite missions, robotics, and bioinformatics. This volume contains the papers selected for the proceedings of the 13th International Workshop on Constraint Solving and Constraint Logic Programming (CSCLP2008) held during June 18-20, 2008 in Rome, Italy. This workshop was organized as the 13th meeting of the working group on Constraints of the European Research Consortium for Informatics and Mathematics (ERCIM), continuing a series of workshops organized since the creation of the working group in 1997. A selection of papers of these annual workshops plus some additional contributions have been published since 2002 in a series of volumes which illustrate the evolution in the field, under the title Recent Advances in Constraints in the Lecture Notes in Artificial Intelligence series.
