It is shown (Calculus of Variations, p. 262) that the value of z which, for certain assigned limits, renders the double integral $y(Dzy (Dzydxdy Zdxdy$ a maximum or a minimum, is given by the partial differential equation Similarly it may be proved that the form of the function w which, for certain assigned limits, renders the symmetrical multiple integral . . . $y(Dxwf (Dvwf (Dzuy . . dxdydz . . .$ or . . . $Wdxdydz . . .$ a maximum or a minimum, is given by the partial differential equation If...
