Reviews

Absolutely essential study ebook. It is among the most remarkable book i have got read through. You will like how the article writer compose this pdf.
(Jessie Rau)

THE COLORADO ENGINEER VOLUME 1-7

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .Therefore, latitude = $53.28.27 + (-23.11.2) = 30.17.07 = 30.17.04$ In this case the accuracy is greater than could be expected, the actual latitude of the station being 30 17 02. Solar Observations for the Meridian.--Burt s solar compass was first used for determining the meridian in surveying, then several solar attachments were invented using the same principle. The advantage in using a solar attachment lies in the fact that it mechanically solves the SZP triangle. Fig. 5, and places the telescope in the meridian at the end of the observation. The disadvantage present in most of them is that the observation cannot be so made as to eliminate the errors of adjustment in either the transit or attachment. With all of them it is necessary to calculate the declination and correct it for refraction before the observation. The direct observation for the meridian is made with the ordinary transit, which preferably should have a full vertical circle so that the errors of adjustment in the instrument can be eliminated by normal and reversed observations. It is an advantage, often, to leave the calculation for the office. The observation consists in determining the sun s altitude and the horizontal angle between the sun and a mark. It should be made at about 9 A. M. or 3 P. M. in winter and farther from noon in summer, but never at about noon nor when the sun is near the horizon....
