LABORATORY REPORT ON THE INVESTIGATION OF THE FLOW AROUND TWO TURBINE-BLADE PROFILES USING THE INTERFEROMETER METHOD

To read **Laboratory Report on the Investigation of the Flow Around Two Turbine-Blade Profiles Using the Interferometer Method** PDF, please access the hyperlink listed below and save the document or gain access to additional information that are have conjunction with LABORATORY REPORT ON THE INVESTIGATION OF THE FLOW AROUND TWO TURBINE-BLADE PROFILES USING THE INTERFEROMETER METHOD book.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. At the request of the Junkers Aircraft and Engine Construction Company, Engine Division, Dessau Main Plant, an investigation was made using the interferometer method on the two turbine-blade profiles submitted. The interferometer method enables making visible the differences in density and consequently the boundary layers that develop when a flow is directed on the profile. Recognition of the points on the profile at which separation of flow occurs is thus possible. By means of the interference photographs the extent of the dead-water region may be ascertained. The size of the dead-water region provides evidence as to the quality of the flow and allows a qualitative estimate of the amount of the flow losses. Interference photographs thus provide means of judging the utility of profiles under specific operating conditions and provide suggestions for possible changes of profile contours that might help to improve flow relations. Conclusions may be drawn concerning the influence of the blade-spacing ratio, the inlet-air angle, and the connection between the curvature of the profile contour and the point of separation of the flow from the profile surface. This item ships from La Vergne, TN. Paperback.
