An incredibly great book with perfect and lucid answers. Better then never, though i am quite late in start reading this one. You will not sense monotony at whenever you want of the time (that's what catalogues are for relating to if you question me).

Not illustrated. 1885 Excerpt: .requires for its demonstration higher algebra than this book introduces, that not only has every number a logarithm, but it has an infinite variety of logarithms, constructed, as the term is, on different scales or bases. The base of any system of logarithms is denned by the fact that in that system unity is its logarithm. The base in ordinary use is 10, and hence with this base $\log 10 = 1$. Logarithms to this base are the only ones which will now be considered in their practical use. 3. Whatever the base be, the logarithm of unity is zero. For since, by Art. 1, $\log a + \log b = \log ab$, let $b = 1$ and. $ab = a$, . $\log a + \log 1 = \log a$, . $\log 1 = 0$. 4. Confining ourselves, as has been just premised, to 10 as the base, we have by Art. 1 $\log 100 = \log 10^2 = 2 \log 10 = 2$, $\log 1000 = \log 10^3 = 3 \log 10 = 3$, $\log 10000 = 4 \log 10 = 4$, and generally, if n be any positive integer, $\log 10^n = n$. Again, $\log = \log 1 - \log 10 = -\log 10$ $\log Tis = \log x \log 10 = -2$. and generally, if n be any positive integer, $\log -- = -n$. 5 10^n 5. The same number cannot have two different logarithms to the same base 10. For if it were possible that a had two different logarithms..
