

Complex Conjugate

Filesize: 7.15 MB

Reviews

Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It has been written in a remarkably easy way in fact it is only right after I finished reading this book in which basically changed me, modify the way I really believe.

Alphascript Publishing Dez 2009, 2009. Taschenbuch. Book Condition: Neu. 220x150x8 mm. Neuware - In mathematics, complex conjugates are a pair of complex numbers, both having the same real part, but with imaginary parts of opposite signs.[1][2] For example, $3 + 4i$ and $3 - 4i$ are complex conjugates. The conjugate of the complex number $z = a + ib$, where a and b are real numbers, is $\overline{z} = a - ib$. An alternate notation for the complex conjugate is \bar{z} . However, the bar z notation avoids confusion with the notation for the conjugate transpose of a matrix, which can be thought of as a generalization of complex conjugation. If a complex number is represented as a 2×2 matrix, the notations are identical. For example, $\overline{(3-2i)} = 3 + 2i$ $\overline{7} = 7$ $\overline{-i} = i$. Complex numbers are often depicted as points in a plane, which is a variation of the Cartesian coordinate system (see diagram). The x -axis contains the real numbers and the y -axis contains the multiples of i . In this view, complex conjugation corresponds to reflection at the x -axis. In polar form, the conjugate of $re^{i\theta}$ is $re^{-i\theta}$. Euler's formula confirms this. 128 pp. English.
